

```
2  int ledPin = 13;
3  int threshold = 500;
4
5  void setup() {
6      pinMode(ledPin, OUTPUT);
7      Serial.begin(9600);
8  }
9
10 void loop() {
11     int lightValue = analogRead(ldrPin);
12     Serial.println(lightValue);
13
14     if (lightValue < threshold) {    // Dark condition
15         digitalWrite(ledPin, HIGH);
16     } else {                          // Bright condition
17         digitalWrite(ledPin, LOW);
18     }
19
20     delay(100);
21 }
```
